PROFILE

A graduate of the University of Padjadjaran with a bachelor’s degree in Marine Science, specializing in coastal ecosystem conservation, blue carbon, and environmental management. I have experience in seagrass and mangrove carbon stock research, field surveys, environmental data analysis, and basic spatial data processing using GIS. I am accustomed to working in teams, managing research data, and preparing technical reports. Committed to contributing to the sustainable management of coastal resources and the environment.

EXPERIENCES

Research Assistant, Torgas Laboratory

Apr 2026 - Now

- Develop a timeline for the implementation of the coastal ecosystem carbon storage research project.
- Support the implementation and supervision of research projects related to carbon storage in coastal ecosystems, including mangroves and coastal sediments.
- Coordinate and oversee laboratory activities in accordance with Standard Operating Procedures (SOPs) and occupational safety guidelines.

Research on Seagrass Carbon Storage at Karapyak Beach, Pangandaran

Augst 2025 - Apr 2026

- Conducting field surveys to collect samples and data on seagrass and sediment biomass.
- Performing laboratory testing and carbon analysis of sediments and seagrass using the Loss on Ignition (LOI) method, as well as estimating seagrass carbon stocks at the study site.
- Processing satellite imagery data to determine the spatial distribution of seagrass beds.

Internship - MBKM PKKM Marine Science Unpad, Pangandaran

Augst 2024 - Nov 2024

- Contributed to the drafting of the Regent’s Regulation on Technical Requirements for Waste Collection, Provision of Temporary Waste Storage Sites (TPS) and/or Permanent Waste Storage Sites (UPS), and Procedures for Applying for and Obtaining Waste Management Permits.
- Coordinating the planning of Coastal Clean-Up sampling activities at Bojongsalawe Beach, Pangandaran, including data entry and processing.
- Coordinating the implementation of field surveys for estimating mangrove carbon stocks in Nusawiru, including assigning team roles, collecting mangrove vegetation samples, and related biota.
- Manage, verify, and analyze field sampling data to support mangrove carbon stock calculations and the evaluation of coastal ecosystem conditions.
- Conduct field observations and identify potential areas for mangrove planting and ecotourism development through site planning.

EDUCATION

Universitas Padjadjaran

Agust 2021 - May 2026

- Bachelor of Marine Science (S.Kel.)
- Conservation (GPA: 3.36)

SMA Negeri 1 Lohbener, Indramayu

July 2018 - May 2021

Department of Mathematics and Natural Sciences

SKILLS

- | | | |
|-----------------------|--------------------------------|------------------------|
| • Ms. Excel | • Teamwork | • Field Survey |
| • Ms. Word | • Carbon Stock Estimation | • Basic Remote Sensing |
| • Database Management | • Coastal Ecosystem Assessment | • GIS (QGIS) |
